CoffeeMe

Cherry Chen

PERSONAL COFFEE APP
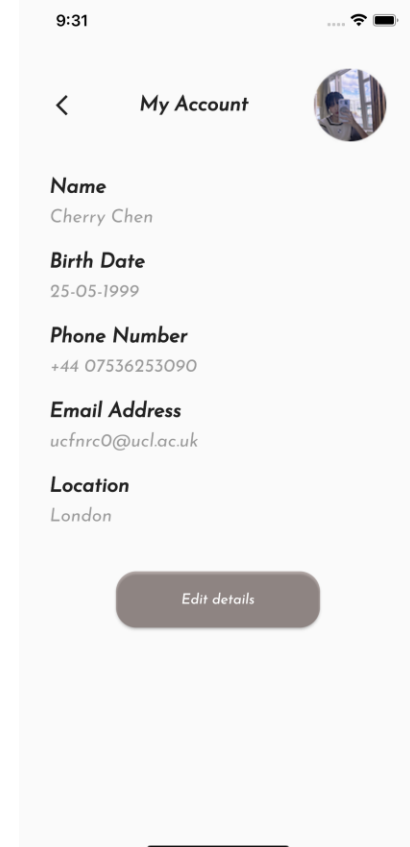

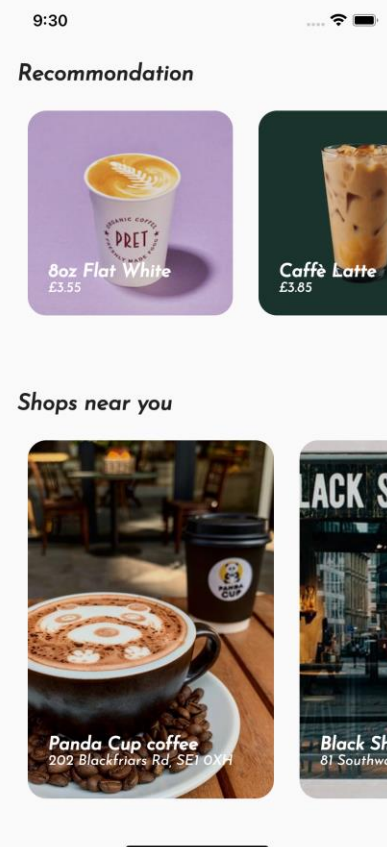

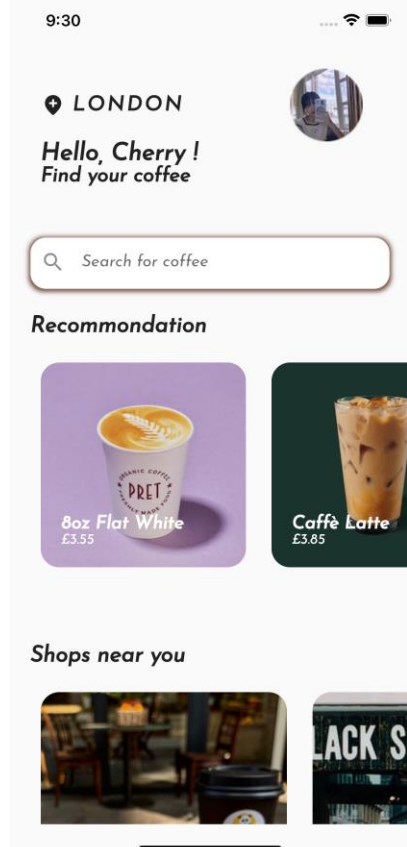

**GITHUB:** HTTPS://GITHUB.COM/XXXCRTTT/COFFEEME

Background

CoffeeMe is a coffee app based on iOS for personal use. I am a daily coffee drinker, and my greatest joy is to try all the coffee from the coffee shops around me. This app provides detailed information about nearby coffee shops and different types of coffee with flavours and prices.
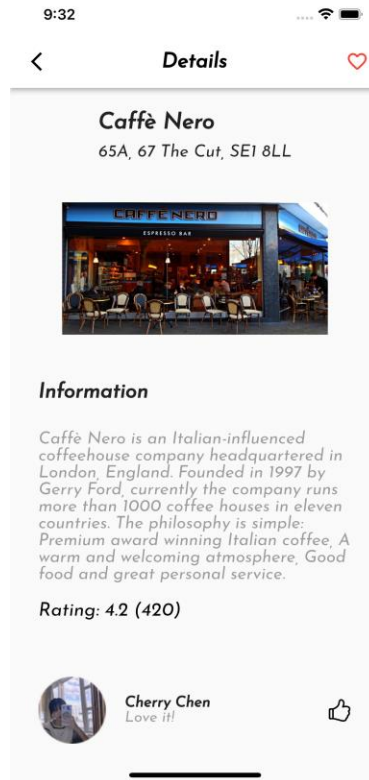

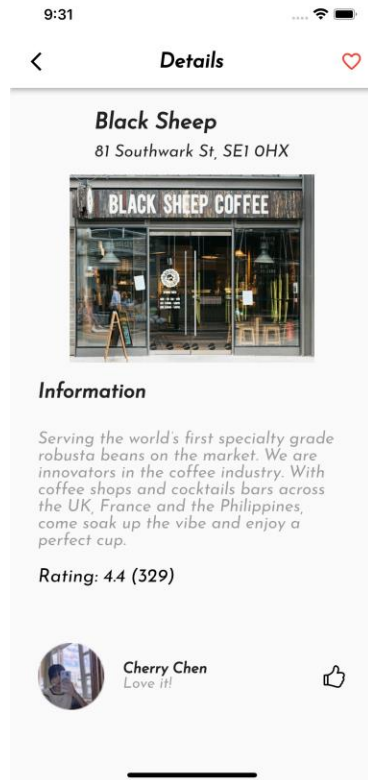

HomePage & Personal Account

Coffee Detail Page

- Shows the description and price of each coffee. (The images and details of the different coffees I used are from Pret A Manger and Starbucks.)

- Click on the red heart in the top right corner to add to favourite.

- Clicking on 'order now' will bring up a pop-up reminder.

Café Detail Page

- Shows several cafes near my home, each of the different shop corresponds to their own picture, description and rating.

```
+----------------------------+----------+
| Frameworks / Packages      | Version  |
+----------------------------+----------+
| Flutter                    | 2.8.1    |
| Dart                       | 2.15.1   |
| flutter_svg                | ^1.0.0   |
| iconsax                    | ^0.0.8   |
| cupertino_icons:           | ^1.0.2   |
+----------------------------+----------+
```

Requirements

- It runs on MacOS, IOS and Webpage.

- It requires to install Flutter and environment–sdk on preferred IDE.

Future Improvements

- Currently, I am the only user of the app, so I have my information under my account; in the future, I can use firebase to create a login page to store and switch between more users.

- The Maps SDK for iOS does not yet contain the architecture necessary to run on the new Arm-based Mac Simulators, so the app does not currently support searching for shop locations via the map.

Thank You!
